A Full Featured, Professional
Cinema Stereo Processor for
Less than \$1200?

HOT FEATURES!

The MOD 7 Cinema Stereo Processor and Video Soundtrack Processor

Why Not! The first DVD players cost over \$1000 and now you can buy them for around \$69.

We took the basic design of our successful MOD VI Cinema Processor, added a few features, removed a few, and developed the MOD 7 without the major development cost normally incurred in designing a product from scratch. To avoid the high cost of American parts and labor we are having this product made in Asia, just like the high end audio and video products you buy for your personal use.

The MOD 7 was designed primarily for export to countries that cannot afford to install a stereo because of their exorbitant import tariffs. Often the shipping and customs charges in these countries nearly equal the price of the product. We hope to change that with a lower priced product, thus lower tariffs.

See the MOD 7 at ShoWest in Las Vegas, Booth #1500

- 7-Channel stereo processor which includes the EX *plus* extra overhead "Envelop" channels for digital players.
- Internal jumpers for video soundtrack use when the MOD 7 is used in a video screening room.
- Patented "Circle Surround®" matrix for superb decoding of analog stereo and also for the EX and Envelop.
- Many more features. Please check our website at www.smartdev.com
